

How much does it cost to make an app like Tinder

1. Discussing the Requirements for App Development

- Platforms
- Type of App
- Complexity
- Infrastructure

2. Concluding Factors Influencing Development Cost

3. Geographic Impact on App Development

4. Estimating Costs for UI & UX Design

5. Deciding on Features and Functions 6. Cost for After-Development Processes

7. Conclusive Factors that Reduce Development Cost

8. Finalizing the Budget Report

What's the deal with Tinder?

Tinder is a free dating app for Android and iOS phones and tablets. Tinder, unlike traditional old-school apps, places a premium on geographical proximity, making it simple and quick to connect with people for long or short-term relationships. The trick is as simple as looking at the potential match and swiping left (No) or right (Like).

The app analyses user data using Facebook accounts and suggests matches based on geographical location, shared interests, or mutual friends. The result of mutual swipes is a match. Tinder alerts users if the people they're looking for are in their area based on their age range and gender.

The secret to the app's success lies in its simplicity and visual appeal. The registration process is virtually non-existent; you simply log in with Facebook and the app pulls data from there. You can also add or edit all of the details, as well as a personal description. Make a good impression and participate!

Tinder features

- In-app purchases (for extra options, ratings, etc.)
- Advanced matching algorithms

- Social media integrations
- Protection from uncensored content and abuse
- User anonymity
- User engaging features, like Tinder Moments
- Match suggestion

Cost to Make an app like Tinder

If you want to create your own dating app and want to know [how much it costs to make an app like Tinder](#), be prepared to spend a lot of money.

The functionality of a Tinder-like app necessitates a complex architecture and lengthy development.

Even a simple version for a single platform can take over 1000 hours to complete.

The most expensive parts of creating an app like Tinder are:

- App development for a single platform: nearly 1000 hours, backend: 200+ hours, design: near 100 hours, PM/QA: up to 100 hours
- The hourly rate of the development team you'd hire is the next big factor to consider when calculating how much it costs to make an app like Tinder.
- Rates can range from \$25 to \$150, as we've mentioned in previous posts about Uber and Whatsapp app costs.
- Assuming we go somewhere in the middle, say \$50 per hour for the sake of our calculation, 1400 hours equals \$70,000.
- However, you can save even more money if you hire our app developers at ThinkMobiles for \$30.

Type of work	iOS	Android	iOS & Android
Web (back-end, admin panel)	→	→	670h (equal for one and two platforms)
Mobile development	619h	622h	1241h
DevOps and meetings	122h	122h	244h
Demo preparation	90h	90h	180h
Release to production	22h	22h	44h
Design	100h	100h	180h
Total time	1623 hours	1626 hours	2559 hours
Total cost	\$81,150	\$81,300	\$127,950
